

Vansh Gupta

+91 9289011325 — vanshgupta7266@gmail.com — [LinkedIn](#) — [GitHub](#) — Bhopal, Madhya Pradesh

Summary

AI/ML, GenAI, and Agentic AI developer focused on building intelligent systems using LLMs, Vision-Language Models, and real-world ML pipelines. Experienced in developing end-to-end applications, deploying scalable AI solutions, and solving practical engineering problems with a strong research mindset.

Education

B.Tech in Information Technology
IIT Bhopal

2024 – 2028
CGPA: 8.62/10

Technical Skills

Languages: Python, C++, C, SQL

AI/ML: Machine Learning, Deep Learning, LLMs, VLMs, RAG, Fine-tuning, PyTorch, TensorFlow, Scikit-learn

GenAI & Agentic AI: LangChain, LangGraph, OpenAI API, Gemini API, HuggingFace, Ollama

Web Development: HTML, CSS, FastAPI (AI-assisted development)

Tools: Git, GitHub, Docker, AWS, HuggingFace Spaces, N8N

Other: Prompt Engineering, AI System Design

Experience

ML Intern — Moleculyst

Feb 2026 – Present

Working on Video LLMs and multimodal AI systems

[View Proof](#)

- Working on Video Large Language Models (Video LLMs) for multimodal understanding.
- Experimenting with LLM architectures, VLMs, and generative AI pipelines.
- Performing data preprocessing, model training, and evaluation.

Projects

Moleculyst Studio — Agentic AI Image Editing System

[Live](#)

Python, Gemini API, VLMs, OpenCV, Docker

- Built an agentic AI system for automated image grounding, editing, and validation.
- Implemented multi-step pipeline with planning, targeting, and VLM-based critique.
- Enabled real-time streaming of reasoning, tool calls, and quality metrics.

TriageAI — Email Triage RL Environment

[Live](#)

Python, FastAPI, Pydantic, OpenEnv, Docker

- Designed a reinforcement learning environment for automated email classification and routing.
- Implemented OpenEnv loop (reset/step/state) with multi-level reward scoring.
- Built LLM-based agent achieving 0.71 average score using LLaMA 3.1.

PharmAI — AI Manufacturing Intelligence Platform

[Live](#)

ML, LSTM, XGBoost, SHAP

- Built ML system predicting pharmaceutical batch quality with >90% accuracy.
- Implemented forecasting and anomaly detection for early failure detection.

AuctionX — Real-Time Auction Platform

[Live](#)

Firebase, JavaScript

- Developed a real-time auction system with sub-100ms synchronization.
- Designed credit-lock and proxy auto-bidding system.

Achievements

- Top 1% (98.16 percentile) in JEE Main 2024; qualified JEE Advanced
- AIR 27 (Finals) – SRMC (IIT Bombay & IIT Madras)
- Finalist — Meta × PyTorch OpenEnv Hackathon (Top among 52,000+ participants; advanced to Grand Finale, Bangalore)
- Hackathon Winner – CodeBidz (1st Position)
- Hackathon Finalist: Top 30/350+ (IIT Bhubaneswar), Top 100/400+ (MITS Gwalior)
- [CodeChef 2★ Rating](#)
